SUMMARY

Backend engineer building event-driven microservices for fintech and enterprise CRM/ERP. Core stack: NestJS, Go, PostgreSQL, Kafka/NATS, Redis, Docker. Own the full cycle from system design to production support and CI/CD.

EXPERIENCE

Backend Developer — Aurora Holding, Almaty

December 2025 – May 2026

- Shipped 10+ backend modules of a CRM/ERP platform to production, serving 500+ daily users across 10+ departments.
- Built microservices in NestJS and Go (Gin) on PostgreSQL: 40+ GraphQL/REST endpoints and gRPC inter-service APIs.
- Migrated inter-service communication to Kafka/NATS events, removing 10 synchronous dependencies and enabling independent deploys.
- Cut execution time of the heaviest SQL queries by 40% (indexing, query restructuring); doubled background-job throughput.
- Co-designed a BPM workflow engine (state transitions, task routing) automating 15+ business processes.
- Covered services with unit and e2e tests; refactored the backend, reducing the codebase ~30% with no behavior changes.

Full-Stack Engineer — Freelance (fintech, crypto, SMB)

August 2023 – November 2025 · Remote

- Built backend services in Go and Python for fintech/crypto clients: payment-gateway and wallet integrations, REST APIs, Telegram bots.
- Delivered full-stack web platforms for businesses — e-commerce webshops and landing pages — using TypeScript, React, and Next.js.
- Built a WhatsApp-to-CRM lead pipeline (Go, Evolution API, Docker, webhooks), automating lead capture end-to-end.
- Developed data aggregators normalizing 10+ external sources; queue-based async processing cut runtime 3x.
- Owned projects end-to-end: requirements, architecture, deployment (Docker, Nginx, CI/CD, Linux VPS).

Full-Stack Developer — Makkah Travel (contract)

June 2023 – August 2023 · Node.js, TypeScript, MongoDB, React

- Built a platform for a travel agency specializing in Umrah and Hajj pilgrimages: public landing page and an admin panel for managing users, documents, and visas.
- Implemented a client management and tracking system with secure storage and processing of personal data.
- Configured the production web server and deployment; kept the application running reliably in production.
- Delivered the project end-to-end from concept to launch: development, integration, and support.

EDUCATION

METU, Almaty — B.Sc. Information Technologies, 2026

nFactorial Incubator 2024 — competitive selection.

SKILLS

Languages: Go, TypeScript/Node.js, Python, SQL

Backend: NestJS, Gin, GraphQL, REST, gRPC, WebSockets, event-driven architecture, unit & e2e testing

Data & Infra: PostgreSQL, Redis, MongoDB, Kafka, NATS, Docker, Docker Compose, Nginx, Linux, GitHub Actions / GitLab CI

Frontend: React, Next.js, TypeScript

LANGUAGES

Kazakh (native) · Russian (fluent) · English (B2)
